CRAB Clinical Informatics Ltd

CRAB Clinical Informatics Ltd

Stephen Mackenney
Chief Executive

CRAB

See the whole picture.

The problem

Existing clinical performance information:

- A focus on management data
- Limited quality metrics:
 - single outcome measures: mortality & readmissions
 - mainly using national aggregate data sets
 - poor risk adjustment: no real case-mix
 - based on averages
 - snapshot analysis exaggerates small anomalies
 - benchmarking not robust
- Ownership of data...
- ...doctors “policed” rather than supported?

CRAB

See the whole picture.

The solution

CRAB: What does it do?

- Calculation of individual patient risk
 - physiological and operative
 - mortality and morbidity
 - Predictive and retrospective
- Presentation as O/E ratio:
 - celebrate successes as well as alerting problems
 - international benchmarking
 - trend and snapshot
 - spectrum analysis by risk decile
 - critical care facilities analysis

CRAB

See the whole picture.

Background

- **POSSUM**

- Recommended methodology:

- Royal College of Surgeons (England, Scotland & Ireland)
- National Confidential Enquiry into Perioperative Deaths (NCEPOD)
- Vascular Society of Great Britain and Ireland
- Association of Coloproctology of Great Britain and Ireland
- Association of Upper Gastrointestinal Surgeons

- In use:

- 34 units in England
- 47 countries worldwide

- **CRAB**

- POSSUM now fully automated, updated, with state-of-the-art web technology and more detailed data capture.
- International referential database of 800,000+ patients: largest of its kind in the world

CRAB

See the whole picture.

Scoring system

- Physiological assessment
 - 12 Variables
 - 4 Grade
 - Exponential increase in grading
- Operative severity assessment
 - 6 Variables (slight variation from general surgery)
 - 4 Grade
 - Exponential increase in grading
- Associated trigger tool for medical care

CRAB

See the whole picture.

Benefits

Simple, secure, web-based system for:

- Consultation support
- Audit aid for individual mortality or morbidity assessment
 - Appropriate outcome?
 - Appropriateness of surgery?
- Early intervention system
 - As an aid to resuscitation, planning care needs
- To assess surgeon/unit performance
 - robust, clinical evidence base for identifying outliers, and causes
 - training and appraisal
 - reliable benchmarking
 - protection for good performers
- Organisational assurance on Clinical Governance issues
- Real patient choice and public accountability

Mortality Surgical Outlier

WHAT OUTLIERS WOULD YOU LIKE TO IDENTIFY?

Denver, 01/01/2006 to 31/12/2008.

1. Choose Outlier Type

<input checked="" type="radio"/>	Unexpected Favourable Outcomes (Above Outlier Threshold)
<input type="radio"/>	Unexpected Adverse Outcomes (Below Outlier Threshold)

2. Set Outlier Threshold

80 %

[CREATE REPORT >](#)

Need Help?

Click the on-screen button to choose the report you would like. (Clicking on one button automatically deselects the other.) Then, set the value of the Outlier Threshold.

Click **CREATE REPORT** to display the report.

The threshold is the risk of an unfavourable outcome calculated using POSSUM and expressed as a percentage. The higher the number, the greater the risk of an unfavourable outcome.

The report shows all cases that meet the selected criteria.
